

Low residue-Low fiber Diet

Fiber is a healthy part of a normal diet. Foods high in fiber and residue may be harder to digest. Sometimes a fiber- and residue- restricted diet may be needed for a short time to help with an illness.

Why do I need a restricted diet?

You may need a fiber- and residue-restricted diet to rest your intestines. This diet also helps to prevent blockage of a narrowed intestinal tract.

Points to Keep in Mind:

- Avoid any food made with raw vegetables, seeds, nuts and raw or dried fruit.
- **Follow this diet for a limited time only.** Talk to your health care provider about when to add fiber- and residue- containing foods back into your diet.

Food Group	Suggested foods	May cause distress
Drinks (caffeine-free preferred)	<ul style="list-style-type: none"> • Strained fruit drinks, carbonated drinks, coffee, tea, milk* as tolerated. 	<ul style="list-style-type: none"> • Any drinks with fruit or vegetable pulp, prune juice*.
