

Kids deserve the best.

Breastfeeding Tips and Diary

- Massage breasts before and during feeding or pumping. This helps increase milk removal.
- If your baby only feeds on one breast or feeds poorly on both, pump after feeding.
- If your baby gets a supplement instead of, or after a feeding, pump both breasts.
- In the first few days and during growth spurts babies may want to feed hourly. Growth spurts often happen at 2 to 3 weeks, 6 weeks and 12 weeks old.

Signs of Good Breastfeeding	Good Positioning and Latch
• Feeds 8 to 12 times in 24 hours.	• Baby is turned with tummy to mom's tummy.
• Feeds well for 10 minutes or longer on first breast. Finishes first breast before offering the second breast.	• Baby is deeply latched taking ½-1" of areola in.
• Has 6 wet diapers daily.	• Baby's lips are flanged, chin is touching breast.
• Has 2 or more seedy yellow stools in 24 hours.	• Baby's ear and temple are moving with suckling.
• Is gaining weight.	• Long bursts of suckling. Swallowing is heard.
	• Breasts are softer after feeding.
	• Baby is satisfied after feeding.

Please call the CHW Lactation Management Service with any questions or concerns about how your baby is feeding at 414-266-1757.
