

Nutrition Tips for a Child with Food Allergies

Always read the label before using a food product. Ingredients can change at any time.

Peanut Allergy

- If your child is allergic to peanuts, talk to your doctor about avoiding tree nuts. They are often all processed on the same equipment. This can lead to cross-contact.
- A good substitute for peanut butter is soy nut butter. It's made out of soybeans. You can also try sunbutter. It's made out of sunflower seeds.

Tree Nut Allergy

- Ask your doctor if your child should avoid all tree nuts. They are often all processed on the same equipment. This can lead to cross-contact.
- If your child is allergic to tree nuts, these foods are okay: nutmeg (spice), water chestnuts and coconut. Contact your allergist if you have more questions about coconut.

Soy Allergy

- If your child is allergic to soybeans, soybean oil and soy lethicin are okay. Most people with soybean allergies can safely eat highly refined soy oil & soy lethicin. **They should not eat cold pressed, expeller pressed or extruded soybean oil.**

Egg allergy

Use in place of eggs for baking:

- Egg replacer by Ener-G foods.
- You can also mix one of these recipes. One mix equals one egg:
 - 1 ½ tablespoon water, 1½ tablespoon oil, and 1 teaspoon baking powder.
 - 1 teaspoon baking powder, 1 tablespoon water, and 1 tablespoon vinegar.
 - 1 teaspoon yeast dissolved in ¼ cup warm water.

Milk allergy

- **Do not give goat's milk to a child with cow's milk allergy.** Goat's milk is similar to cow's milk. It may cause an allergic reaction.
- If your child has a milk allergy, be sure that they are getting an age appropriate milk substitute. Talk to your doctor or dietitian about good milk substitutes for your child.
- **There are many milk-free margarines available.** Try Fleishman's Unsalted Stick Margarine, Earth Balance Soy Free Buttery Spread, or Smart Balance Light.

Helpful tips for all allergies

- Make a list of ingredients to avoid.
- Learn to read a food label.
- Avoid foods with cross-contamination or cross-contact.
- Have an emergency action plan.
- Look for single ingredient foods such as fruits, vegetables, meats and beans.
- Buy a medical ID bracelet.
- When in doubt, avoid the food.
