

Breastfeeding: Breast milk pumping guidelines

Day 1 to 4	How often	How long	Tips	Storage
<p>Colostrum Phase</p> <p>Start pumping within 1 hour after delivery. If unable, pump as soon as you can.</p> <p>Use a hospital grade double electric breast pump.</p> <p>Health insurance often covers the cost of a breast pump.</p> <p>Ask your nurse or the Lactation Consultant for help to get a breast pump.</p>	<p>Pump every 3 hours from the start of the last pumping.</p> <p>Pump day and night. This would be 8 times in 24 hours.</p> <p>You may need to use an alarm clock to wake up at night to pump.</p> <p>Keep a record of the amount pumped and put on the schedule. (see pumping record) or use a pumping phone App.</p> <p>Drink 6 to 8 ounces of fluids, at each pumping. Water is the best to drink.</p>	<p>Use the INITIATE pump program for the 1st day of pumping to stimulate milk production.</p> <p>Use the MAINTAIN pump program after the 1st day of pumping to empty better.</p> <p>Start to pump on the lowest suction setting. Turn up the suction as high as is comfortable for you. Turn the suction down if it hurts.</p> <p>If you have nipple pain, the pump flanges may be too small.</p> <p>Ask the Lactation Consultant to fit you with larger flanges.</p>	<p>At first, some mothers pump nothing or only a few drips. Others may pump much more.</p> <p>For the first 3-4 days, hand express more colostrum on to a spoon or into a medicine cup after you use pump.</p> <p>After that, hand express while you pump to empty more completely.</p> <p>Hand expression: Form a "C" shape with your hand. Place your fingers under your breast and your thumb on top about 1 inch back from the areola. Compress, Relax & Repeat 10 times. Switch back and forth on each breast. Collect milk onto a spoon, small cup or breast pump cup.</p> <p>You can make or buy a pump bra to hold the parts on. Ask your Lactation Consultant for information.</p>	<p>Swab drips of colostrum with a cotton tip applicator for mouth cares. Ask your Lactation Consultant or nurse for more information.</p> <p>Small amounts of colostrum can be drawn up into a small syringe from the spoon or cup. Pump & store into the small (1 oz) containers until they are half full.</p> <p>Do not put breast milk from different pumpings together while your baby is in the hospital.</p> <p>Always pump into a container that is larger than you can fill.</p>
Day 4 to 14 and Beyond	How often	How long	Tips	Storage
<p>Transitional Milk to Mature Milk</p> <p>Breast milk usually comes in on day 4 - 6. Or slower if mom is ill, had a C-section or took some medicines.</p>	<p>Pump every 3 hours, day and night.</p>	<p>Pump until no more milk drips from the yellow valves. Once milk comes in this can be 20 to 30 minutes.</p>	<p>If you have to, pump earlier than 3 hours instead of skipping or waiting too long.</p> <p>Hand express into the pump cup/bottle after you stop pumping to get even more milk.</p>	<p>Leave extra room in containers when freezing.</p> <p>Use the containers from the hospital, not use storage bags.</p> <p>Use the containers once.</p>

After 2 weeks	How often	How long	Tips	Storage
<p>Mature Milk Each mom produces a different amount.</p> <p>Goals for Pumping If you plan to breastfeed or feed all breast milk, you should have a minimum amount by week 2.</p> <p>Your goal is to pump a minimum of 2 ½ to 3 oz each pumping (75-90mls) or 20 to 25 oz per day (600-750 mLs).</p> <p>Some mothers take longer to get this amount.</p> <p>Talk with the Lactation Consultant if you have a low supply.</p> <p>Any breast milk is good for your baby!</p>	<p>How often you pump is based on your supply.</p> <p>If you are at goal: Continue to pump every 3 hours.</p> <p>If you are below goal: Increase pumping to every 2 hours during the day.</p> <p>If you are greater than goal: Talk to the Lactation Consultant to set a schedule. Some moms may need to pump less often.</p> <p>Do not skip night time pumps unless you have a good supply or you need rest.</p>	<p>Massage and hand expression with pumping helps empty more milk so, you make more milk. It can also speed up the pump session.</p>	<p>Use the Pumping Record to keep track of times and amounts from each pumping.</p> <p>Keeping a record will help you see if your milk supply is going up or down. Your milk supply may go down with missed pumpings. More frequent pumping should increase your supply.</p> <p>Do not skip pumping. Pump early if you will be unable to pump at the planned time.</p> <p>A written schedule may help keep pumping on time.</p> <p>If your baby isn't taking all of your milk do not decrease pumping frequency.</p> <p>It is often hard to increase your supply again after cutting back. You will want to keep up your supply as your baby grows and is eating more.</p>	<p>Pump into bigger bottles and pour milk into storage containers</p> <p>If your baby is taking fresh milk, store 96 hours worth of feedings in the refrigerator.</p> <p>If your baby isn't feeding all your fresh milk, freeze it within 24 hours from when it was pumped.</p> <p>If using frozen milk, thaw only the amount to be fed within 24 hours.</p> <p>Talk with the Lactation Consultant if you have questions about storage</p>
